TABLE No. 2.

To find Tangent and External for curve of  
any other degree, divide by degree of curve and  
add connection found in column of connection.  
Degree of curve with a given  $L$  may be found  
by dividing tangent (or external) opposite  $L$  by  
given tangent (or external).

The distance from a point on the tangent to  
the curve is very nearly the square of the tangent  
length divided by twice the radius.
