Distance of slope stake from side or shoulder stake for any width roadway, slope 1 to 1. If ground is nearly level, the cut or fill at side stake is located by the double entry method in left column and top row. The number in body of table in same row and column gives distance from side stake to slope stake. If ground is not level estimate the difference in elevation between the side stake and slope stake, lower target by this amount if cut, elevate if fill. Add this amount to cut or fill and find distance in table. Set up rod at this point, and line of sight should cut target. If it does not make the slight adjustment necessary.

TABLE XIII—CORRECTIONS FOR TANGENTS AND EXTERNALS

These corrections are to be added to the approximate values, found by dividing the tangent, or external, for a 1° curve (Table VIII) by the degree of curve, in order to obtain the true tangents, or externals. Intermediate values may be obtained by interpolation.

NOTE: THIS BOOK SHOWS SMALL OR HAND TOOLS, LUMBER, PIPE, FUEL AND LUB. OIL, CEMENT, AGGREGATE, R.R. RAILS AND TIES, AIR HOSE, AND ALL OTHER EXPENDABLE MATERIALS, INCLUDING POWDER, USED ON THE JOB.

Permission received from Heicke to use bolts instead of rivets in 36" drain pipe joints, purchased by C.P. Watson.

NOTE: These bolts will not work - not enough threads.

* 1150 Bolts returned to L.H. by Oscar Benson on Dec. 24 to exchange for $\frac{3}{8}$ " x 1" bolts.

NOTE: RED CHECK INDICATES INVOICE O.K. ED.

DATE	No.	DESCRIPTION.
Nov. 25, '52.	410 FT.	36" GALV. IRON PIPE WITH RIVETS AND 3 BANDS FOR JOINTS.
